A front-end developer with more than 5 years experience architecting and implementing software solutions for the desktop environment. I possess an uneasy matched talent for learning and exploring new technologies and practices, devising solutions and solving problems without sacrificing code quality.

Having recently relocated to London, I see myself working onsite for an innovative company, developing products in JavaScript's React or Vue. And as part of a solid team, continuing being passionate about the work I do and driving my skills to perfection.

SKILLS & AREAS OF INTEREST

- Developing Optimized React + ES6 + Webpack Production builds
- Modern CSS approaches= PostCSS + CSS-modules
- Test Driven Development with Jest & Enzyme
- Hybrid Agile Kanban/Scrum methodologies

Project History

2016 – Present

PROJECT DEVELOPMENT TEAM – Spain
Remote kanban team member
Spain

- As a team member of a startup which aims internationally, I am proud of being part of the development team of his web app.
- Improve understanding of scrum values in complex project development
- Collaborate with team to understand items in the Product Backlog
- Deliver increment of product functionality in each sprint as set in goals
- Self-organize in how best to accomplish work
- Linting and testing code is emphasized during all the process
- Front-end views with React/Redux, backend with Express and MongoDB

2013 – 2016

FINCASPACE - FINCASPACE.COM – Spain
Full stack web developer
Spain

- As founder of Fincaspac, I solely developed a web app that manages the office work and documents in a homeowners' association making administrators more efficient in their communications
- Integrated user authentication with Google

- Use of Google Cloud Storage web service to store documents
- Admin manages listings for different homeowners associations, with their apartments and users, as well as listings for documents published
- Admin can publish documents that are accessible to all homeowners instantly
- Bulk communication to all homeowners possible through email templates
- Front-end technologies used are ExtJS, a JavaScript MVC framework, which created all views and actions in the app
- Back-end technologies include Symfony3, an object oriented PHP framework. Chosen for the REST API cores of the app as well as for connecting to the MySQL database.
- Finally, the app has been loaded to a PaaS service provider called OPENSIFT of RedHat, where deployment was made with Git version control.
- Wrote up technical manuals and user instructions. See <http://guia.fincaspace.com>

2011 – 2015

IGUANALOCALMEDIA – Spain
Web designer / Marketeer
 Spain

- I have over 5 years experience in the creation of websites for companies in different sectors.
- I create work that improved the visibility of clients
- Technologies used are Bootstrap and WordPress
- Notions learned range from copywriting, SEO, Google Analytics, Adwords and Facebook marketing
